

In the Claims:

Please rewrite Claim 5 to read as follows:

5. A motor, comprising:

an outer case containing a stator and a rotor, said stator fixed on said casing and having a shaft, said rotor disposed around said shaft to rotate about said shaft, said rotor having a commutator;

a brush having a first end fixedly electrically coupled to said stator and a second end upwardly extended toward said rotor; and

a curved bending portion formed on said second end of said brush and having a contact line parallel to said commutator to be electrically contact with said commutator.

In response to the restriction requirement, the applicants provisionally elect to prosecute Claim Group I, comprising Claims 1-4 and 15 in the present application, but respectfully traverse the restriction requirement, as all claims basically relate to the same invention.

**REMARKS**

This patent application presently includes Claims 1-20, which have been subjected to a restriction requirement. Claim 5 is amended to correct a typographical error, and provisional election is made of Claim Group I.
